

## Electrolux Group Restricted Materials List v20

The Electrolux Group Restricted Materials List (RML) specifies the chemical substances that are classified as "Banned", "Restricted" and "Substances of Concern" by Electrolux Group. The RML was introduced in 2003 and is regularly updated.

Electrolux Group strives to provide more sustainable solutions throughout its value chain, including the use of safe materials that do not pose hazards to people and the environment.

The Electrolux Group has issued the RML to achieve compliance with legislation on chemicals and the Electrolux Group Environmental Policy, and to facilitate a consistent approach to managing chemical substances in products.

The purpose of the RML is to avoid and provide information about materials and substances that:

- may represent hazards to the environment or the health of workers, customers or consumers,
- could have an impact on end-of-life properties,
- could be related to human rights abuses in the supply chain or that might cause other concerns.

The RML also serves to inform suppliers and other stakeholders about unwanted chemical substances and their status according to Electrolux Group requirements.

### General principles

The RML is valid for all products, packaging and components put on the market by the Electrolux Group, regardless of whether they are manufactured by the Group or external sources.

Electrolux Group and its suppliers shall always follow applicable national and local legislation. Substances that are not banned, restricted or not included on the RML are not automatically acceptable to use. In addition, substances that are legal to use may be included on the RML.

The RML does not apply to spare parts replacing a component of the equivalent type.

Electrolux Group and its suppliers shall secure that unwanted substances are not present according to RML requirements, classifications and limit values.

In general, a limit value will be based on the risk phase for the substance. For substances regulated by legislation, Electrolux Group may decide to apply a more stringent limit value.

The RML restrictions do not apply to chemical substances occurring in the form of impurities below limit values and that are not intentionally added.

Newly acquired units shall comply with the RML within three years.

### Substance classification

RML substances are classified as:

- ***Banned Substances:***  
Substances that shall not be used in any product put on the market under any brand of the Electrolux Group
- ***Restricted Substances:***  
Restricted Substances shall not be used in products put on the market under any brand of the Electrolux Group, but specific exemptions are defined in the RML. Exemptions may refer to geographical regions, applications or presence during a planned phase out period.
- ***Substances of Concern (SoC):***  
SoC are listed because they generate concern now or may do so in the future. They are allowed to be used but their presence shall be reported and alternative substances with no concerns should be preferred. In the case of conflict minerals, concerns are linked to sourcing practices rather than to substance properties.

Classification may target either groups of substances or specific substances. It may be based on the chemical structure, properties, risks or regulations and standards.

When a substance belongs to several RML groups with different classifications, the most stringent classification applies.

## Governance and update

Electrolux Group Management has adopted the Group position statement regarding the RML.

Group Management decides to include or change the classification of substances on the RML based on updates of potential impact on business.

Suppliers shall report on the use of any substance listed in the RML and shall use the approved and available Electrolux Group reporting databases, where available, for this purpose.

Business Areas are responsible to ensure compliance with the RML through the appropriate resources and processes.

Any deviation from the RML requirements shall be promptly reported to Electrolux Group through the usual business channels.

The RML is regularly reviewed according to new facts, market demands and scientific evidence. Based on this information, a new version is issued at least once each year.

An updated version of the RML shall be communicated to suppliers and it is publicly available on the Electrolux Group website.

## Maximum Concentration Values

The RML requirements apply to substances present in concentrations above 0.1% in weight. However, a substance forbidden by RML shall not be intentionally added even if the resulting concentration of the substance would be below 0.1% in weight.

The concentration shall be calculated on purchased material or article (for assembled products on all subcomponents, including those that might be sold as spare parts).

The concentration for RoHS substances and POPs substances listed in the Stockholm Convention<sup>9</sup> shall be calculated on homogeneous material<sup>10</sup> as defined by the RoHS directive. General limit values are 0.1% except for Cadmium, which is limited to 0.01%. RoHS exemptions and limit values in force apply<sup>11</sup>. The sum of concentration levels of lead, cadmium, mercury and hexavalent chromium present in packaging or packaging components shall not exceed 0.01% (100 ppm) by weight as defined in the EU Packaging Directive.

If different concentration values are foreseen by legislation or in specific RML requirements, the most stringent value applies (e.g. legal limit value for dimethyl fumarate is 0.1 ppm in the EU).

Electrolux Group may define other material specific requirements in Component Specifications, Technical Guidelines or other documentation and supplier agreements.

## Supplementary Specifications

All Electrolux Group products shall comply with the requirements specified in this document. Further requirements, references to test methods or necessary documentation to prove compliance, are defined in separate technical guidelines, product specifications, drawings and other documents.

“Technical Guideline for Compliance with the RML requirements - SP000011302” specifies test methods and documentation requirements to prove compliance with a focus on substances included in the RML.

“Technical Guideline for Materials and Articles in contact with Food (FCM) - SP000003871” specifies reference test methods, necessary documentation, risk class and other supplier requirements for articles in contact with food for European markets.

Requirements for recycled plastic are specified in the Annex of this document and in the “Technical Guideline for Recycled Plastic - SP000006455”.

The relevant documents are available to qualified Electrolux Group suppliers through the usual business channels.

# ANNEX I

## Electrolux Group requirements for recycled plastics

### Introduction

Use of recycled materials is necessary for establishing closed loop systems for products. There are several benefits with the use of recycled plastics:

- it reduces the use of limited natural resources
- it reduces the amount of waste ending up in the nature or going to landfill.
- it reduces the amount of carbon dioxide emitted in production of new plastic materials.

Electrolux Group has requirements on restriction of use of chemicals in materials and components via its Restricted Materials List - RML. However, recycled plastics often have unknown origins which makes a full substance declaration according to the RML difficult. Instead, a risk-based approach has to be used.

These provisions have the objective to promote the use of recycled plastic without compromising high quality and environmental standards of Electrolux Group products.

### Legal Requirements

Recycled materials have to fulfil all applicable legal requirements.

Examples of potentially applicable laws are:

- **EU RoHS – Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment**  
Ban of Pb, Cd, Hg, Cr (VI), PBBs and PBDEs. The maximum concentration value tolerated for lead, mercury, hexavalent chromium, PBB, and PBDE is 0.1% by weight in homogeneous materials and for cadmium is 0.01%.
- **EU Packaging Directive**  
Lead, cadmium, mercury and hexavalent chromium are prohibited in packaging. Maximum concentration levels is of 100 ppm, as total sum. Concentration levels are calculated for each packaging component, not at the homogeneous material level required by RoHS. Directive 94/62/EC on packaging and packaging waste and its amendments.
- **EU REACH – Registration, Evaluation and Authorization of Chemicals**  
Recyclers have to inform on the presence of candidate list substances as well as comply with the marketing and use restrictions of REACH (annex 17).
- **EU Regulation on Plastic Materials and Articles Intended to Come into Contact with Food**  
Food contact plastic materials shall not transfer their constituents to food in quantities which could endanger human health, change unacceptably the composition or deteriorate organoleptic characteristics of the food. Specific requirements on manufacturing, labelling, composition and traceability apply.
- **EU Regulation on recycled plastic materials and articles intended to come into contact with foods**  
Food contact recycled plastic materials shall only be placed on the market if they fulfil specific requirements for recycling process, material input streams and quality control.
- **U.S. FDA Food Contact Substance (FCS) Requirements**  
The U.S. FDA requires that all FCS products are determined safe for their intended use before they are permitted for sale in the United States.

## Electrolux Group requirements

The following specific requirements apply to recycled plastics:

A substance declaration according to the RML for recycled plastics is required and shall include raw materials documentation. The specific requirements (e.g. specific limits and tests) and quality procedures to be fulfilled for the approval, supplier audit, and implementation are reported in the separate reference document "Technical Guideline for Recycled Plastic - SP000006455", which is available to qualified suppliers through usual business channels.

In addition, the following requirements must be fulfilled:

1. Supplier shall inform Electrolux Group about use of recycled plastic; the use of such material in any application is allowed only after Electrolux Group approval.
2. Suppliers shall declare the origin of the recycled plastic and provide evidence of the origin and characteristics of the source material upon request.
3. Due to the nature and origin of recycled plastics, contaminants may be present and their content may vary over time, with significant impact and risk for the chemical compliance. For this reason, for critical elements (e.g. Bromine, Lead, etc.) a threshold limit below legal limit may be required. In addition, content levels shall be verified over time by analytical analysis, e.g. XRF.
4. All substances intentionally added during the processing (e.g. stabilizer, pigment, lubricants, compatibilizer or flame retardants) must comply with the RML requirements, including declaration requirements.
5. Recycled materials used in articles intended to come into contact with food must fulfil all applicable legal requirements.
6. Fluorinated plastics must not be intentionally added.
7. Recycled PVC shall not be used.
8. Recycled plastics containing refractory ceramic fibers / asbestos classified as CMR 1A or 1B shall not be used
